About the course Laravel email

Course Presenter : Tony Xhepa

Laravel email, in this course you will learn how to send, customize, and manage emails within a Laravel application. This course covers configuring email services using SMTP or popular providers like Mailgun, SendGrid, and Amazon SES. You will explore Laravelâ€™s Mailable classes, create dynamic and reusable email templates with Blade, and send both HTML and plain text emails. We will cover attaching files, embedding images, and using Markdown for clean and responsive email layouts. Youâ€™ll also learn how to queue emails for delayed sending, improving performance, and how to set up notifications for automated messages. Additionally, the course will show you how to test and debug emails in development environments using tools like Mailtrap. By the end, you will have the skills to build robust, professional, and efficient email functionality for any Laravel project. Tony Xhepa

Programming Category's Courses

Course Lesson(6)
