About the course Laravel roles and Permissions

Course Presenter : Tony Xhepa

Laravel roles and Permissions, in this course is designed to teach you how to implement role-based access control (RBAC) in your Laravel applications. In this course, we will learn about setting up roles and permissions to control user access to specific features and sections of your app. You will explore both building the system from scratch and using powerful packages like Spatie Laravel-Permission for faster development. Topics include creating database tables for roles and permissions, assigning roles to users, granting and revoking permissions, and using middleware for route protection. We will also cover managing multiple guards, working with role hierarchies, and building an admin panel for managing user permissions. By the end of the course, you will be able to create secure, scalable, and maintainable access control systems that ensure only authorized users can perform certain actions in your Laravel projects. Tony Xhepa

Programming Category's Courses

Course Lesson(7)

Lesson 1 : **Laravel Auth Role Create Admin Middleware To Protect Routes**

Lesson 2 : **Laravel Auth Role Create an Admin Section to Separate From Users**

Lesson 3 : **Laravel Auth Role Create an Admin Dashboard Layout with Tailwind CSS and Alpine JS**

Lesson 4 : **Laravel Auth Role Create Role Model and Migration and Assign The Role to a User**

Lesson 5 : **Laravel Auth Role Create Permissions with Gates to Authorize Users**

Lesson 6 : **Laravel Auth Role Create Permissions with Laravel Policy to Authorize Users**

Lesson 7 : **Laravel Roles and Permissions with Gates and Policies Full Tutorial for Beginners**
