About the course Testing in laravel

Course Presenter : Tony Xhepa

Testing in laravel, in this course provides a complete guide to writing and running tests to ensure your Laravel applications work reliably and efficiently. In this course, we will learn about the fundamentals of testing, including the differences between Unit Tests and Feature Tests, and when to use each. You will explore Laravelâ€™s built-in testing tools, how to use PHPUnit and Pest for writing clean and effective tests, and how to simulate HTTP requests to test your routes, controllers, and middleware. We will also cover database testing with factories, seeders, and migrations to ensure data integrity, as well as mocking and faking external services for isolated test scenarios. Additionally, you will learn browser testing with Laravel Dusk to automate UI interactions. By the end of the course, you will have the skills to implement a robust testing strategy that improves code quality, prevents bugs, and speeds up development in Laravel projects. Tony Xhepa
