# About the course Laravel 8 API

### Course Presenter : Tony Xhepa

Laravel 8 API, in this course you will learn how to build robust and scalable RESTful APIs using Laravel 8. The course begins with setting up a Laravel project and configuring the database, followed by creating models, migrations, and controllers to handle API requests. Youâ€™ll implement CRUD operations, request validation, and use API Resources for structured JSON responses. The course covers authentication and authorization using Laravel Sanctum, as well as file uploads, pagination, filtering, and sorting. Youâ€™ll learn to handle errors gracefully, use middleware for security, and implement API versioning for long-term maintainability. Additionally, youâ€™ll explore testing API endpoints with tools like Postman and PHPUnit. By the end, you will have the skills to develop and deploy secure, efficient, and well-documented APIs ready for integration with mobile apps, SPAs, or third-party services. Tony Xhepa
