About the course Principles of anatomy

Course Presenter : Ø§Ù„Ù…Ø¹Ù‡Ø¯ Ø§Ù„Ù†ÙˆÙ†Ù Ø§Ù„ØµØ§Ù„Ø

Principles of anatomy, in this course introduces students to the structural organization of the human body and its major systems. It begins with anatomical terminology, body planes, and directions, then explores tissues, organs, and their relationships. Key systems studied include skeletal, muscular, nervous, cardiovascular, respiratory, digestive, urinary, and reproductive systems, highlighting how structure and form support physiological functions. Students also learn about surface anatomy and the clinical relevance of anatomical landmarks in diagnosis and medical procedures. The course emphasizes the importance of understanding normal anatomy as the basis for detecting disease and planning treatment. Practical learning may involve anatomical models, imaging techniques, and dissections to enhance visualization of structures. By linking theory with practice, the course prepares learners for advanced studies in medicine, nursing, and allied health, equipping them with the foundational knowledge needed to apply anatomy in clinical decision-making, patient care, and scientific research.
