About the course Radiography technology

Course Presenter : Ø§Ù„Ù…Ø¹Ù‡Ø¯ Ø§Ù„ÙˆØ·Ù†Ù‰ Ø§Ù„ØµØÙ‰

Radiography technology, The Radiography Technology course provides a comprehensive introduction to the science and practice of medical imaging using X-rays. It covers the fundamental principles of radiation physics, image formation, and the operation of radiographic equipment. Students will learn about positioning techniques for different body regions, optimizing image quality, and minimizing patient exposure while ensuring diagnostic accuracy. The course also emphasizes radiation protection standards, safety measures for patients and staff, and international protocols for ethical imaging practices. Practical training includes handling radiographic machines, understanding digital imaging systems, and applying quality control procedures. In addition, the course explores the role of radiography in diagnosing bone fractures, chest conditions, gastrointestinal studies, and other pathologies. By integrating theoretical knowledge with clinical practice, students gain the skills needed to perform radiographic examinations confidently and contribute effectively to patient care in hospitals, clinics, and diagnostic centers.
