

About the course JADAM organic farming

Course Presenter : JADAM Organic Farm Garden

JADAM organic farming, in this course introduces learners to a low-cost, eco-friendly farming system developed in South Korea by Youngsang Cho. JADAM, which stands for "Join the Advanced Development of Alternative Methods," empowers farmers to produce their own natural inputs using locally available resources. The course covers the preparation of JADAM Microorganism Solution (JMS), liquid fertilizers, natural pesticides, and sulfur-based protectants. Students will explore how microbial life, herbal extracts, and simple techniques can replace expensive commercial products. With a focus on soil health, pest resistance, and sustainable food production, JADAM makes organic farming accessible and affordable for all. By the end, participants will understand how to apply JADAM methods step by step, reduce farming costs, improve crop yields, and contribute to a cleaner, more self-sufficient agricultural future.
