About the course Excel VBA

Course Presenter : David McLachlan

Excel VBA, in this course teaches learners how to automate and customize Excel tasks using Visual Basic for Applications (VBA). It starts with the basics of macros, variables, loops, and conditional statements, then advances to building dynamic tools and automating repetitive processes. Participants will learn to create user-friendly forms, interact with worksheets and external data sources, and develop efficient solutions for data management, analysis, and reporting. The course also covers debugging, error handling, and best coding practices to ensure smooth performance. By applying real-world projects, learners gain the confidence to design their own automation systems that save time, reduce errors, and improve productivity. By the end, theyâ€™ll be able to transform manual Excel operations into smart, automated workflows. David McLachlan

Computer Softwares Category's Courses

Course Lesson(19)
