About the course Git crash

Course Presenter : Net Ninja

Git crash course, in this course The Git Crash course is a fast-paced and practical introduction to Git, designed to help developers quickly master essential version control skills. This course focuses on real-world usage rather than long theory, making it ideal for beginners and professionals who need Git for daily work. You will learn how to create and manage repositories, track changes, write meaningful commits, and work with branches and merges confidently. The course also covers collaboration using GitHub, including cloning repositories, pushing and pulling changes, and handling pull requests. Common problems such as merge conflicts, undoing commits, and recovering from mistakes are explained step by step. By the end of the course, you will be able to use Git efficiently in personal and team projects, follow best practices, and collaborate smoothly in modern software development environments.
