About the course Data fundamentals

Course Presenter : Alex The Analyst

Data fundamentals course, introduces learners to the core concepts of working with data in modern digital environments. This course explains what data is, how it is collected, stored, and processed, and why it plays a critical role in decision-making and technology-driven businesses. You will learn the basics of data types, data structures, and data sources, as well as an introduction to databases, spreadsheets, and data analysis tools. The course also covers fundamental concepts such as data quality, data cleaning, and basic data visualization. Through practical examples, learners will understand how data is used in real-world scenarios across different industries. By the end of the course, you will have a solid foundation in data literacy, enabling you to understand data-driven discussions, work effectively with data tools, and prepare for more advanced topics in data analysis, data science, and business intelligence.
