About the course Installing git and gitHub

Course Presenter : Alex The Analyst

Installing git and gitHub course, The Installing Git and GitHub course is designed to help beginners set up their development environment and start using version control with confidence. This course guides learners step by step through installing Git on different operating systems, including Windows, macOS, and Linux. It explains how to configure Git with user information and understand basic settings. In addition, the course covers creating a GitHub account, navigating the GitHub interface, and creating repositories. You will learn how to connect Git to GitHub using secure authentication methods and perform your first practical actions such as cloning repositories, committing changes, and pushing code to GitHub. By the end of the course, learners will be ready to manage their projects, track code changes, and collaborate effectively using Git and GitHub in real-world development workflows. Alex The Analyst
