About the course Selenium with cucumber for beginners

Course Presenter : SDET QA

This comprehensive online training course introduces beginners to the powerful combination of Selenium and Cucumber, two essential tools in the field of automated software testing. Designed for those interested in advancing their skills in Computer Science and quality assurance, this course provides a practical, hands-on approach to mastering automation testing frameworks. By enrolling, learners gain valuable knowledge to enhance their professional skills and open doors to new career opportunities in the tech industry. Throughout this course, you will learn how to implement Selenium WebDriver for browser automation and integrate it seamlessly with Cucumber for Behavior-Driven Development (BDD). The training covers foundational concepts and advanced techniques, empowering you to develop reliable automated test scripts and improve testing efficiency. What you will learn: - Fundamentals of Selenium WebDriver and its architecture - How to write and execute automated test scripts - Introduction to Cucumber and BDD practices - Creating feature files and scenarios using Gherkin syntax - Integrating Selenium with Cucumber for effective test automation - Best practices for maintaining and scaling automation frameworks - Troubleshooting common issues in automation testing This course is ideal for aspiring QA testers, software developers, and IT professionals seeking to strengthen their automation skills. Whether you are starting your journey in Computer Science or looking to upgrade your professional profile, this training provides the essential knowledge needed for success. Why choose this course on our platform: - High-quality, professionally curated content tailored for beginners - Interactive lessons with practical exercises and real-world examples - Access to expert instructors and dedicated support - Recognized certification upon completion to boost your resume - Flexible online format to learn at your own pace Career opportunities after completing this certified course include roles such as Automation Tester, QA Analyst, Software Developer in Test, and QA Engineer. Gaining expertise in Selenium and Cucumber significantly enhances your potential for career growth in the dynamic field of software testing and quality assurance. Enroll today to start your journey toward becoming a skilled automation testing professional and earn a recognized certificate to validate your new skills in the competitive Middle East tech market.
