# About the course Chemical engineering analysis and modeling

## Course Presenter : IIT Roorkee July 2018

Unlock the potential of chemical engineering with this comprehensive online course designed to enhance your analysis and modeling skills. Whether you are a student, a professional, or an industry expert in the Middle East, this training course offers valuable insights into the core principles of chemical engineering. Gain practical knowledge that can significantly boost your career growth and professional skills in a competitive industry. Throughout this course, you will learn how to apply advanced analysis techniques and develop accurate models for complex chemical processes. This training course covers key topics including process simulation, data analysis, process optimization, and safety considerations. By the end of the program, you will be equipped with the tools needed to solve real-world engineering challenges efficiently and effectively. This course is ideal for engineering students, practicing chemical engineers, technical managers, and professionals seeking to deepen their expertise in chemical process analysis and modeling. If you aim to stay ahead in the rapidly evolving field of engineering, this certified course provides the essential foundation for your continued development. Why choose this course on our platform? We offer expertly designed content, flexible online learning options, and a focus on practical application. Our training courses are tailored to meet industry standards and include real-world case studies to enhance your understanding. Completing this course provides a recognized certificate that validates your skills and commitment to professional growth. Career opportunities after completing this course include roles such as process engineer, chemical analyst, process optimization specialist, and project manager within the chemical, petroleum, and manufacturing industries. The certification can serve as a valuable credential to advance your career and open doors to higher-level positions. Enroll today to gain a professional certification in chemical engineering analysis and modeling, and take a significant step toward achieving your career goals in the engineering sector. Our platform is dedicated to your success, providing the tools and knowledge you need to excel. IIT Roorkee July 2018

**Engineering Category's Courses**

# Course Lesson(61)

Lesson 1 : **Lecture 60 Artificial Intelligence Machine Learning in Chemical Engineering**

Lesson 2 : **Lecture 59 Nanoscale Simulations in Chemical Engineering DFT Case Studies**

Lesson 3 : **Lecture 58 Nanoscale Simulations in Chemical Engineering Methods**

Lesson 4 : **Lecture 57 Nanoscale Simulations in Chemical Engineering Basics**

Lesson 5 : **Lecture 56 Recent Trends in Chemical Process Modeling**

Lesson 6 : **Lecture 55 Rate Based Methods for Vapor Liquid Separations Continued**

Lesson 7 : **Lecture 54 Non Equilibrium Effects and Rate Based Methods for Vapor Liquid Separations**

Lesson 8 : **Lecture 53 Equation Tearing SR Method NR Method Inside Out Method**

Lesson 9 : **Lecture 52 MESH Equation in Tridiagonal Matrix Form Equation Tearing BP Method**

Lesson 10 : **Lecture 51 Introduction to MESH Equation**

Lesson 11 : **Lecture 50 Examples Degree of Freedom of Cascades**

Lesson 12 : **Lecture 49 Liquid Liquid Extraction Cascades Absorption and Stripping Cascade**

Lesson 13 : Lecture 48 Examples on Separations

Lesson 14 : Lecture 47 K values Cascades Solid Liquid Cascade

Lesson 15 : Lecture 46 Basics of Separations

Lesson 16 : Lecture 45 Bipartite Graph for Complex Reactions Other Applications of Graph Theory

Lesson 17 : Lecture 44 Application of Graph Theory in Analyzing Reaction Mechanisms

Lesson 18 : Lecture 43 Revisiting Badger McCabe Method using Graph Theory Tearing

Lesson 19 : Lecture 42 Decomposition of Large Scale System Composed of Nonlinear Elements

Lesson 20 : Lecture 41 Example on Graph Theory

Lesson 21 :
Lecture 40 Using Graph Theory for Decomposition of Large Scale Linear Systems Continued

Lesson 22 : Lecture 39 Using Graph Theory for Decomposition of Large Scale Linear Systems

Lesson 23 : Lecture 38 Graph Theory Incidence Matrix and Augmented Incidence Matrix Examples

Lesson 24 : Lecture 37 Graph Theory Cyclical Nets

Lesson 25 : Lecture 36 Introduction to Graph Theory

Lesson 26 : Lecture 35 Numerical Methods of Solving Equations V

Lesson 27 : Lecture 34 Numerical Methods of Solving Equations IV

Lesson 28 : Lecture 33 Numerical Methods of Solving Equations III

Lesson 29 : Lecture 32 Numerical Methods of Solving Equations II

Lesson 30 : Lecture 31 Numerical Methods of Solving Equations I

Lesson 31 : Lecture 30 Case Study Making Biscuit in an Oven

Lesson 32 : Lecture 29 Example on Heat Equation

Lesson 33 : Lecture 28 More on the Solution of 1D Heat Equation for a Slab

Lesson 34 : Lecture 27 Solution of 1D Heat Equation for a Slab

Lesson 35 : Lecture 26 Derivation of Heat Equation

Lesson 36 : Lecture 25 Multiple Effect Evaporators Badger McCabe Method

Lesson 37 : Lecture 24 Problems on Evaporators

Lesson 38 : Lecture 23 Multiple Effect Evaporators Material and Energy Balance Continued

Lesson 39 : Lecture 22 Multiple Effect Evaporators Material and Energy Balance

Lesson 40 : Lecture 21 Single Effect Evaporator

Lesson 41 : Lecture 20 Modeling of Chemical Reactors Energy Balance Continued Case Study

Lesson 42 : Lecture 19 Modeling of Chemical Reactors Examples Energy Balance

Lesson 43 : Lecture 18 Modeling of Chemical Reactors Example Problems

Lesson 44 : Lecture 17 Modeling of Chemical Reactors Design Equations in Terms of Conversion

Lesson 45 : Lecture 16 Modeling of Chemical Reactors Mole Balances and Design Equations

Lesson 46 : Lecture 15 Process Simulations

Lesson 47 : **Lecture 14 Material Balance on a Flowsheet**

Lesson 48 : **Lecture 13 Process Representation and Flowsheeting**

Lesson 49 : **Lecture 12 Phase Equilibrium Continued Degrees of Freedom Gibbs Phase Rule**

Lesson 50 : **Lecture 11 Mixing and Phase Separation Phase Equilibrium**

Lesson 51 : **Lecture 10 Laws of Chemical Kinetics Chemical Equilibrium**

Lesson 52 : **Lecture 09 Thermodynamics Continued**

Lesson 53 : **Lecture 08 Thermodynamics**

Lesson 54 : **Lecture 07 Material and Energy Balance**

Lesson 55 : **Lecture 06 Equations of Motion Transport Equations**

Lesson 56 : **Lecture 05 Time to Travel Example**

Lesson 57 : **Lecture 04 Spring Dashpot Example Continued**

Lesson 58 : **Lecture 03 Systems and Subsystems Types of Modeling Spring Dashpot Example**

Lesson 59 : **Lecture 02 Introduction to Modeling**

Lesson 60 : **Lecture 01 Introduction to Chemical Engineering**

Lesson 61 : **Analysis and Modeling in Chemical Engineering**
