# About the course RF transceiver design fundamentals

### Course Presenter : IIT Roorkee July 2018

Discover the essential principles of RF transceiver design with our comprehensive online course, tailored for engineering professionals seeking to enhance their technical expertise. This training course offers in-depth knowledge of RF transceiver fundamentals, enabling learners to develop practical skills that are highly valued in the telecommunications and electronics industries. Whether you are aiming for career growth or aiming to stay ahead in the competitive engineering field, this certified course provides the foundation needed to excel. Throughout this online course, you will learn to: - Understand the core concepts of RF transceiver architecture and operation - Analyze modulation techniques and signal processing methods - Design and optimize RF transceiver components for various applications - Apply best practices for troubleshooting and testing RF systems - Explore emerging technologies and trends in RF communication This course is ideal for electrical and electronics engineers, technical professionals, and students focused on RF and wireless communication systems. If you are seeking to expand your professional skills, earn a recognized certification, and open new career opportunities in the Middle East or globally, this training course is designed for you. Choosing this course on our platform ensures access to expert-led instruction, flexible learning schedules, and a verified certificate that enhances your professional profile. Our dedicated support team and comprehensive learning resources make it easier to master complex concepts at your own pace. Upon successful completion, you will receive a professional certificate that validates your expertise in RF transceiver design. This credential can significantly boost your employability and position you for advanced roles in engineering, research, and development. Invest in your career growth today by enrolling in this certified training course and take a strategic step toward becoming a proficient RF engineer. IIT Roorkee July 2018

**Engineering Category's Courses**

# Course Lesson(61)

Lesson 1 : **Lecture 01 Basic of Wireless Communication I**

Lesson 2 : **Lecture 02 Basic of Wireless Communication II**

Lesson 3 : **Lecture 03 Basic of Wireless Communication III**

Lesson 4 : **Lecture 04 Basic of Wireless Communication IV**

Lesson 5 : **Lecture 07 Noise in RF Systems I**

Lesson 6 : **Lecture 08 Noise in RF Systems II**

Lesson 7 : **Lecture 09 Noise in RF Systems III**

Lesson 8 : **Lecture 10 Noise in RF Systems IV**

Lesson 9 : **Lecture 05 Basic of Wireless Communication V**

Lesson 10 : **Lecture 06 Basic of Wireless Communication VI**

Lesson 11 : **Lecture 11 Non Linearity in RF System I**

Lesson 12 : **Lecture 12 Non Linearity in RF Systems II**

Lesson 13 : **Lecture 13 Non Linearity in RF Systems III**

Lesson 14 : **Lecture 14 Transceiver Architecture I**

Lesson 15 : **Lecture 15 Transceiver Architecture II**

Lesson 16 : **Lecture 16 Transceiver Architecture III**

Lesson 17 : **Lecture 17 Transceiver Architecture IV**

Lesson 18 : **Lecture 18 Transceiver Architecture V**

Lesson 19 : **Lecture 19 Transceiver Architecture VI**

Lesson 20 : **Lecture 20 Transceiver Architecture VII**

Lesson 21 : **Lecture 21 Active Devices I**

Lesson 22 : **Lecture 22 Active Devices II**

Lesson 23 : **Lecture 23 Active Devices III**

Lesson 24 : **Lecture 24 Active Devices IV**

Lesson 25 : **Lecture 25 Passive Components Impedance Matching â€“ I**

Lesson 26 : **Lecture 26 Passive Components Impedance Matching â€“ II**

Lesson 27 : **Lecture 27 Passive Components Impedance Matching â€“ III**

Lesson 28 : **Lecture 28 Passive Components Impedance Matching â€“ IV**

Lesson 29 : **Lecture 29 Passive Components Impedance Matching â€“ V**

Lesson 30 : **Lecture 36 Low Noise Amplifier Design I**

Lesson 31 : **Lecture 37 Low Noise Amplifier Design II**

Lesson 32 : **Lecture 39 Low Noise Amplifier Design IV**

Lesson 33 : **Lecture 40 Low Noise Amplifier Design V**

Lesson 34 : **Lecture 41 Low Noise Amplifier Design VI**

Lesson 35 : **Lecture 38 Low Noise Amplifier Design III**

Lesson 36 : **Lecture 30 Passive Components Impedance Matching VI**

Lesson 37 : **Lecture 31 Passive Components Impedance Matching VII**

Lesson 38 : **Lecture 32 Stability and Amplifier Design I**

Lesson 39 : **Lecture 33 Stability and Amplifier Design II**

Lesson 40 : **Lecture 34 Stability and Amplifier Design III**

Lesson 41 : **Lecture 35 Stability and Amplifier Design IV**

Lesson 42 : **Lecture 42 Mixer Design I**

Lesson 43 : **Lecture 43 Mixer Design II**

Lesson 44 : **Lecture 44 Mixer Design III**

Lesson 45 : **Lecture 45 Mixer Design IV**

Lesson 46 : **Lecture 46 Mixer Design V**

Lesson 47 : **Lecture 47 Mixer Design VI**

Lesson 48 : **Lecture 48 Mixer Design VII**

Lesson 49 : **Lecture 49 Mixer Design VIII**

Lesson 50 : **Lecture 50 Mixer Design IX**

Lesson 51 : **Lecture 51 Oscillator Design I**

Lesson 52 : **Lecture 52 Oscillator Design II**

Lesson 53 : **Lecture 53 Oscillator Design III**

Lesson 54 : **Lecture 54 Oscillator Design IV**

Lesson 55 : **Lecture 55 Power Amplifier Design I**

Lesson 56 : **Lecture 56 Power Amplifier Design II**

Lesson 57 : **Lecture 58 Basics of Phase Locked Loop I**

Lesson 58 : **Lecture 59 Basics of Phase Locked Loop II**

Lesson 59 : **Lecture 57 Power Amplifier Design III**

Lesson 60 : **Lecture 60 System Level Considerations**

Lesson 61 : **Lecture 61 RF Testing and Measurement Techniques**
