Mindluster Platform

About the course Debugging Python

A debugger is a program that can help you find out what is going on in a computer program. You can stop the execution at any prescribed line number, print out variables, continue execution, stop again, execute statements one by one, and repeat such actions until you have tracked down abnormal behavior and found bugs.

Programming Category's Courses

Course Lesson(7)

Lesson 1 : **NameError name x is not defined Python NameError**

Lesson 2 : **UnboundLocalError local variable x referenced before assignment Python Debugging**

Lesson 3 : **OverflowError math range error Python Error Debugging**

Lesson 4 : **ZeroDivisionError integer division or modulo by zero Python Debugging**

Lesson 5 :
AttributeError module object has no attribute and ImportError No module named Python

Lesson 6 : **ImportError DLL load failed 1 is not a valid Win32 application Python Debugging**

Lesson 7 : **Python Solving ValueError Too many values to unpack**
