Mindluster Platform

About the course Python If Else

The == operator compares the value or equality of two objects, whereas the Python is operator checks whether two variables point to the same object in memory. In the vast majority of cases, this means you should use the equality operators .

Programming Category's Courses

Course Lesson(10)

Lesson 1 : **body mass index in python**

Lesson 2 : **check if list is empty in python**

Lesson 3 : **fibonacci recursive in python**

Lesson 4 : **find max and min in python**

Lesson 5 : **net amount of bank account in python**

Lesson 6 : **text to acronym in python**

Lesson 7 : **check if list elements are unique v2 in python**

Lesson 8 : **fizz buzz in python**

Lesson 9 : **leap year in python**

Lesson 10 : **print sum table in python**
