About the course Advance CSS

What is advanced CSS? Advanced CSS is a set of tools and techniques that help you create the modern websites that employers and clients are looking for. These skills help you make websites more responsive more easily so, whatever kind or size of device someone is using to view your site, it looks fantastic and works well. No more overlapping images or tiny text! Advanced CSS also allows you to structure your web pages more efficiently. Yep, that means you can forget floats (!!!) but still position and align elements exactly the way you want and have your content flexibly change size or location just the way you need it to. Or you can use advanced CSS to completely customize a site by styling only certain elements or automatically adapting content. Not only will advanced CSS skills make it possible for you to build and style the kinds of sites that are most in demand nowadays, but theyâ€™ll also let you do it more quickly, easily, and efficiently. Youâ€™ll be able to get more done with less code, and the code you do write will be more understandable and organized, so youâ€™ll be able to work better both on your own and on a team. Advanced CSS is a set of tools and techniques that help you create the modern websites that employers and clients are looking for. These skills help you make websites more responsive more easily so, whatever kind or size of device someone is using to view your site, it looks fantastic and works well. No more overlapping images or tiny text!
